

6/16/2011 Milfoil Treatment Information

The chemicals that are being used are Sculpin G and Renovate MaxG. They both have 2-4-D as the active ingredient which has been used in the past but this form of 2-4-D is the amine form and is not pH dependent which the other

2-4-D product (Navigate) was pH dependent. It has been concluded that the pH is too high in round lake for the Navigate product to work effectively. The Renovate also has an additional chemical in it (triclopyr) which has been shown to be effective on EWM.
